EDUCATION

B.Sc. Software Engineering
Technical University of Varna, Bulgaria
2024 – Present

Associate Degree, Computer Programming
Işık University, Istanbul
2022 – 2024

SKILLS

SECURITY

Web Security · Basic Penetration Testing · SQL Injection

PROGRAMMING

Python · C# · SQL · HTML / CSS

TOOLS

Linux (Kali) · Virtual Machines · Git / GitHub

LANGUAGES

Turkish — Native
English — Intermediate

PROFILE

Software Engineering student at the Technical University of Varna with a strong focus on cyber security, especially web security, penetration testing and vulnerability analysis. I build and ship real tools end to end: from a passive website security scanner published on GitHub to a live, paid web platform running on my own Linux server. I am looking for an internship or junior role in cyber security or software development where I can gain hands-on experience and contribute to real-world projects.

PROJECTS

Web Site Tester — 2026 · v1.05

Open-source passive web security scanner · github.com/Xocsayh/web-site-tester

- Python CLI tool that analyses websites without active attacks and produces a detailed risk report.
- Checks missing security headers, HTTPS usage, cookie flags (Secure, HttpOnly, SameSite), and robots.txt / sitemap.xml / security.txt exposure.
- v1.05: redesigned risk-scoring model, fewer false positives and more realistic results on large platforms (Google, Vercel), plus CLI version checking.

Stack: Python · HTTP · Kali Linux

OddsEdge: oddsedgepicks.com — 2026 · Live

Data-driven football analytics platform with subscriptions

- Designed and launched a full-stack web platform that compares bookmaker odds against a sharp-market fair price to identify "value" picks, validated with historical backtesting.
- Built the FastAPI back end, Stripe subscription payments, a multi-language UI (EN/TR/PL/PT) and a Telegram bot for automated pick delivery.
- Deployed and hardened it on a Hetzner Linux VPS (systemd, HTTPS, security headers, rate limiting).

Stack: Python · FastAPI · SQL · Stripe · Telegram Bot API · Linux

Cyber Security Portfolio Website — 2026

xocsayh.github.io

- Personal portfolio presenting my work in web security, penetration testing and SQL injection analysis, with an offer to review and test websites.

Stack: HTML · CSS · JavaScript · GitHub Pages

FoodShare: Food Waste Platform — University project

Web application for sharing surplus food

- Developed an MVC web app with user accounts, listings and a relational database. Also produced UML diagrams and full technical documentation.

Stack: C# · ASP.NET Core 8 MVC · SQLite · Entity Framework

Sistem Kıran: 2D Action Game — Personal project

Unity 2D game

- Built combat mechanics, animations, an in-game shop system and multi-language localization.

Stack: C# · Unity

COURSEWORK & LABS

Network & Information Security Labs — TU Varna

- Hands-on labs on BGP routing, e-mail security, site-to-site VPN and OpenVPN configuration.
- Virtualised lab environments on Linux for testing and analysis.

COURSES & CERTIFICATIONS

Python Programming — Arı Bilgi

Arı Bilgi Information Technologies

- Completed a hands-on Python programming course covering core language fundamentals, scripting and problem solving.

Cyber Security — Üçüncü Binyıl Akademi

Üçüncü Binyıl Akademi

- Completed cyber security training covering security fundamentals, offensive/defensive concepts and practical hands-on exercises.
